**ORGANIC VOLATILE IMPURITIES / RESIDUAL SOLVENTS**

(PPS280, Rev. 1.2, 02/18, KMC)

RE: Organic Volatile Impurities / Residual Solvents in Sulfuric Acid – all grades – manufactured by Greenfield Global USA Inc. These OVIs, or Class 1, 2, and 3 Residual Solvents, are defined by the current USP/NF General Chapter <467> and International Conference on Harmonization Q3C Impurities: *Residual Solvents*.

Sulfuric Acid is an inorganic compound manufactured by inorganic processes. Solvents are NOT used at any point in the manufacturing or handling of Sulfuric Acid.

Greenfield Global USA Inc. maintains dedicated storage and handling systems for our Sulfuric Acid and neither uses nor has any reason to suspect that any Class 1, 2 3 or 4 solvents are produced in the manufacturing process.
